Permanent residence · Unrestricted work authorisation

PROFILE

Engineer who takes AI systems the last mile — from a client's messy real problem to something running in production that people use. Built an extraction platform for a consulting client end to end and still maintain it. Four years at Statista, from forecasting the semiconductor and cloud markets to engineering the pipelines underneath — so I can hold both halves of the conversation.

PROFESSIONAL EXPERIENCE

Data Engineer

Jan 2026 – Present

Statista GmbH, Hamburg · Full-time

- Build internal data products for news intelligence, translating what analysts and product owners need into pipelines and retrieval systems.
- Semantic search over large sharded vector indexes; a client library that made retrieval self-service for other internal teams.
- Own reliability and observability for production pipelines.

AI Consultant & AI Automation Engineer

Mar 2025 – Present

Swift ProSys · Freelance, Remote

- Sole engineer and client contact: scoped the problem, designed the system, shipped it, still maintain it.
- Delivered a platform now used by **~200 people** across language-specific teams, handling **6,000,000,000 tokens** in five months.
- Built template-driven extraction so non-technical operators add new document types without engineering involvement.
- Gave the client cost control — per-project spend analytics and routing across **five model providers** to move workloads on price or capability.
- Made failures legible: 12-category diagnostics and an escalating retry ladder, so operators see why a run failed instead of re-running blind.

Data Analyst

Apr 2025 – Jan 2026

Statista GmbH, Hamburg

- Owned market forecasts for four segments — Semiconductors, Public Cloud, AI and Data Center — published in Statista's **Technology Outlook** and sold to clients.
- Automated recurring analytical processes, improving turnaround across release cycles.

Junior Analyst

Dec 2023 – Mar 2025

Statista GmbH, Hamburg

- Published market KPIs and forecasts feeding a commercial data product; accountable for accuracy from raw source to published figure.

Working Student

Jul 2022 – Oct 2023

Statista GmbH, Hamburg

- Built the first Python and SQL pipelines; product matching with applied NLP.

Technical Intern

Jul 2020 – Jan 2021

Garuda Aerospace, Chennai, India

- Drone telemetry analysis and fault reporting for the engineering team.

EDUCATION

M.Sc. Smart Systems

Oct 2021 – Oct 2023

Hochschule Furtwangen University, Germany

- Thesis: a convolutional network identifying regional plant and insect species from photographs, served behind an API with continuous retraining.

B.E. Mechatronics Engineering

2017 – 2021

Agni College of Technology, Chennai, India · Grade 8.27 / 10

SKILLS

Delivery	Client scoping, solution design, rapid prototyping, production handover, stakeholder communication
AI & LLM	Large Language Models (LLM), Retrieval-Augmented Generation (RAG), vector search and vector databases, AI agents and agentic workflows, LangChain, LangGraph, Agno, model evaluation, OCR and structured data extraction
Engineering	Python, SQL, TypeScript, AWS, Docker, PostgreSQL, pgvector, Supabase, ETL and data pipelines, React, Electron, CI/CD
Domain	Semiconductor, public cloud, AI and data center markets; news intelligence

LANGUAGES

English — full professional proficiency · German — B1, working towards B2

CERTIFICATIONS

Python for Data Analysis, Coursera (2022) · Machine Learning with Python, Coursera (2022)
